

Analytics Update: Over 50 Route Analysis Metrics Now Available

- Route4Me users now have over 50 route analytics metrics computed for them automatically
- The metrics are refreshed in real-time based on any changes to associated routes and stops on a route
- Because there are so many new metrics available, a helpful support article has been put together to document and explain each metric
- Some metrics are particularly important, and automatically compute SPORH (Stops per Operating Hour) and TPORH (Transactions per Operating Hour)
- Stem-In and Stem-Out time have also been added, so that routes can be analyzed less the time it takes to travel to and from the depot
- See the full list of route metrics here:
 - <http://support.route4me.com/route-planning-help.php?id=manual11:tutorial4:chapter12> and
